

Supplementary Figure S1. Age-specific numbers and rates of diet high in red meat-related DALYs and death in males and females of 5 SDI regions. **A** – Age-specific numbers and rates of diet high in red meat-related DALYs in males and females of low SDI regions. **B** – Age-specific numbers and rates of diet high in red meat-related DALYs in males and females of low-middle SDI regions. **C** – Age-specific numbers and rates of diet high in red meat-related DALYs in males and females of middle SDI regions. **D** – Age-specific numbers and rates of diet high in red meat-related DALYs in males and females of high-middle SDI regions. **E** – Age-specific numbers and rates of diet high in red meat-related DALYs in males and females of high SDI regions. **F** – Age-specific numbers and rates of diet high in red meat-related deaths in males and females of low-SDI regions

DALY – disability-adjusted life year; SDI – socio-demographic index.

Supplementary Figure S1. Cont. **G** – Age-specific numbers and rates of diet high in red meat-related deaths in males and females of low-middle SDI regions. **H** – Age-specific numbers and rates of diet high in red meat-related deaths in males and females of middle SDI regions. **I** – Age-specific numbers and rates of diet high in red meat-related deaths in males and females of high-middle SDI regions. **J** – Age-specific numbers and rates of diet high in red meat-related deaths in males and females of high SDI regions

DALY – disability-adjusted life year, SDI – socio-demographic index.

Supplementary Material 1. Checklist of information that should be included in new reports of global health estimates

Item #	Checklist item	Section/paragraph/ interpretation
Objectives and funding		
1	Define the indicator(s), populations (including age, sex, and geographic entities), and time period(s) for which estimates were made.	Method/Definitions section
2	List the funding sources for the work.	Funding section
Data inputs		
For all data inputs from multiple sources that are synthesized as part of the study:		
3	Describe how the data were identified and how the data were accessed.	Method/Definitions and Data source section
4	Specify the inclusion and exclusion criteria. Identify all ad-hoc exclusions.	Method/Definitions section
5	Provide information on all included data sources and their main characteristics. For each data source used, report reference information or contact name/institution, population represented, data collection method, year(s) of data collection, sex and age range, diagnostic criteria or measurement method, and sample size, as relevant.	Method/Data source section
6	Identify and describe any categories of input data that have potentially important biases (e.g., based on characteristics listed in item 5).	Method/Definitions section
For data inputs that contribute to the analysis but were not synthesized as part of the study:		
7	Describe and give sources for any other data inputs.	Method/Data source section Global Burden of Disease Collaborative Network (http://ghdx.healthdata.org/gbd-results-tool).
For all data inputs:		
8	Provide all data inputs in a file format from which data can be efficiently extracted (e.g., a spreadsheet rather than a PDF), including all relevant meta-data listed in item 5. For any data inputs that cannot be shared because of ethical or legal reasons, such as third-party ownership, provide a contact name or the name of the institution that retains the right to the data.	Method/Data source section Global Burden of Disease Collaborative Network (http://ghdx.healthdata.org/gbd-results-tool).
Data analysis		
9	Provide a conceptual overview of the data analysis method. A diagram may be helpful.	Flow diagrams of the overall methodological processes were available online (http://ghdx.healthdata.org/gbd-2019/code)
10	Provide a detailed description of all steps of the analysis, including mathematical formulae. This description should cover, as relevant, data cleaning, data pre-processing, data adjustments and weighting of data sources, and mathematical or statistical model(s).	Method/Statistical analyses section
11	Describe how candidate models were evaluated and how the final model(s) were selected.	Method/Statistical analyses section
12	Provide the results of an evaluation of model performance, if done, as well as the results of any relevant sensitivity analysis.	Result
13	Describe methods for calculating uncertainty of the estimates. State which sources of uncertainty were, and were not, accounted for in the uncertainty analysis.	Method/Statistical analyses section
14	State how analytic or statistical source code used to generate estimates can be accessed.	Method/Statistical analyses section

Supplementary Material 1. Cont.

Item #	Checklist item	Section/paragraph/ interpretation
Results and Discussion		
15	Provide published estimates in a file format from which data can be efficiently extracted.	Result/Tables section
16	Report a quantitative measure of the uncertainty of the estimates (e.g., uncertainty intervals).	Result/Tables section
17	Interpret results in light of existing evidence. If updating a previous set of estimates, describe the reasons for changes in estimates.	Discussion/paragraph 1-5
18	Discuss limitations of the estimates. Include a discussion of any modelling assumptions or data limitations that affect interpretation of the estimates.	Discussion/paragraph 6

Supplementary Material 2. Definitions materials

	Definition
Disability-adjusted life years (DALY)	DALY means the sum of years lost due to premature mortality (YLL) and ill-health disability (YLD). One DALY represents the loss of the equivalent of one year of full health [1].
Socio-demographic index (SDI)	SDI is a composite indicator to evaluate social development which combines income per capita, total fertility rates, and average educational attainment, and it is expressed on a scale of 0 to 1 [2]. Countries and territories are categorized into five groups by applying SDI (high, high-middle, middle, low-middle, low SDI).
Age stratification	We split ages into those age groups including age under 20, 25–29, 30–34, 35–39, 40–44, 45–49, 50–54, 55–59, 60–64, 65–69, 70–74, 75–79, 80 plus years.
Estimated annual percentage changes (EAPC)	We used EAPC to quantify the trends of age-standardized death and DALY rates. The regression model was applied in the mathematical formulae of EAPC by fitting age-standardized data from 1990 to 2019 into $y = \alpha + \beta x + \epsilon$, where $y = \ln(\text{rate})$ and $x = \text{calendar year}$. Furthermore, the EAPC was calculated by $100 \times (\exp(\beta) - 1)$, together with its 95% uncertainty interval (UI) [3].
Age-standardized data	The age-standardized data could eliminate the confounding of ages.
